

CAP Pro R

*Asphalt Cement with
Renewable Content*

CAP Pro R

Asphalt Cement with Renewable Content

The sustainable future of paving has arrived

CAP Pro R is the first asphalt cement with renewable content in Brazil designed to reduce Green House Gases emissions while maintaining the quality of asphalt products. It combines field-proven quality and good performance with environmental responsibility.

Key Benefits of CAP Pro R

ENVIRONMENTAL:

Lower carbon intensity with the same quality and performance as conventional asphalts

Renewable content with 100% Petrobras technology incorporated

Meets the growing global demand for sustainable products

Aligned with the Fair Energy Transition and a low-carbon future.

TECHNICAL & QUALITY:

Same quality as the Asphalt Cement with renewable content sold by Petrobras

Rigorously tested in laboratory, at industrial scale, and on the roads

Excellent stability, compatibility, and synergy between mineral and renewable feedstocks

The same logistics as conventional asphalt paving

The same applications as conventional Asphalt Cement with renewable content (paving and industrialization)

Technical Support

Technical team available for training, and application support.
